25X1 [redacted] H

Declass Review by
NIMA/DOD

25X1 [redacted] talked to me after trying first to reach you. He wants us to help [redacted] 25X1 who has a problem. Don is confronted by some agnostic who worries about obliquity [redacted] 25X1 photography. Says that photography/interpretation 25X1 useless out beyond [redacted] obliquity. This, of course, is ridiculous. Therefore, the solution is to be a briefing prepared by us. 30 to 45 min. long and to be presented during the week of 14 Dec. Briefing should be based on good photo. illustrations showing intelligence gained/resolutions achieved, etc at various high obliquities. Briefer should try to inter-relate scale, obliquity, haze, P.I. perception, perhaps deflade, etc.

Talked to PNS and AEM. We think

Approved For Release 2005/07/12 : CIA-RDP78B05703A000700060018-2

25X1 that a [redacted] team could do it.

25X1 [redacted] OK's on going to [redacted] for 25X1
additional details, clarifications, etc, etc.

We thought that [redacted] might take our 25X1
latest obliquity report ([redacted]) over to 25X1
Don, show, discuss, query, note, etc, etc
and then come back with the scenario which
we would seek to illustrate/support.

25X1 After [redacted] is satisfied with the 25X1
briefing, then he will probably take [redacted]
into the lion's den to brief the agnostic.
Am cutting out of this pattern in preparation
to go to Chicago. Will leave it to
PNS/you and AEM to see that it
comes off as best we can make it.

25X1 P.S. [redacted] is to be the [redacted] CIA.
25X1 when query to [redacted]
